Counting for Dollars 2020

16 Large Federal Assistance Programs that Distribute Funds on Basis of Decennial Census-derived Statistics (Fiscal Year 2015)

#3: Medicare Part B (Supplemental Medical Insurance) – Physicians Fee Schedule Services

The [first report](#) of the Counting for Dollars Project examines 16 large federal financial assistance programs that use Decennial Census-derived data to geographically distribute funds. This fact sheet describes the **Medicare Part B –Physicians Fee Schedule Services**, its reliance on Census-derived data, and funds distribution by state.

Objective: Provide medical insurance protection for covered services to persons age 65 or over, to certain disabled persons and to individuals with end-stage renal disease.

Catalog of Federal Domestic Assistance (CFDA) #: [93.774](#)

Applicant and beneficiary eligibility: All persons eligible for Medicare Part A. Enrollment in Part B is voluntary.

Type of assistance: Direct payment for physician services (which comprise under half of total Part B expenditures).

Reimbursement formula: Physicians services are reimbursed by specific services based on Geographic Practice Cost Indices (GPCIs) for 89 GPCI Payment Localities nationwide. See [fact sheet](#).

Primary Census-derived data sources: Geographic Practice Cost Indices (HHS), which are based in part on Core-based Statistical Areas (OMB) and data from the American Community Survey (Census)

Relation to accuracy of state and local Decennial Census count: Positive

A Decennial Census undercount of total population could result in erroneous GPCIs. In particular, the likelihood of errors in determining Payment Locality boundaries and reimbursement rates would rise.
